

ISAAC RABIN

Full Stack Software Engineer | Java · C# · Angular · React · API Integration

+254 729 176 560 • isaacmrongo@gmail.com • linkedin.com/in/isaac-rabin • Nairobi, Kenya

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience in system integration, backend development, and API-driven data exchange across enterprise and digital health platforms. Skilled in Java (Spring Boot), Angular, and C#(.NET), with hands-on experience designing and integrating RESTful APIs and building end-to-end workflows across application, data, and reporting layers. Familiar with FHIR-based interoperability standards and experienced configuring and integrating health information systems including DHIS2-connected reporting pipelines. Proven ability to troubleshoot complex multi-layer issues, support iterative UAT releases, and collaborate effectively in agile delivery teams operating in fast-paced, multi-country implementation contexts.

PROFESSIONAL EXPERIENCE

Griffin Global Technologies

Feb 2023 – Mar 2026

Software Engineer – System Integration & APIs | Remote · Enterprise Platforms & System Integrations

- Designed and maintained scalable backend services and RESTful APIs using Java (Spring Boot), Angular, .NET and Java, Node.js, and Python, enabling data exchange and system integrations across enterprise platforms serving thousands of concurrent users.
- Built and maintained integrations across application, data, and reporting layers - supporting data capture, synchronization, and end-to-end workflow implementation aligned with interoperability standards including REST-based and FHIR-compliant service patterns.
- Contributed to data pipeline development and reporting integrations, supporting analytics workflows and structured data exchange with downstream reporting systems, including configuration aligned with DHIS2 connectivity requirements.
- Supported user acceptance testing (UAT) across iterative releases - identifying and resolving issues across backend, database, and integration layers to maintain workflow stability in production environments.
- Collaborated with cross-functional delivery teams in agile sprints - translating functional requirements into working system configurations, participating in architectural discussions, and aligning implementation with overall system design.
- Documented configurations and technical workflows using Git/GitHub, enforcing structured branching strategies and maintaining clear records of integration patterns across distributed delivery teams.
- Containerized applications using Docker and orchestrated with Kubernetes, achieving zero-downtime releases across cloud environments.

Adanian Labs

Oct 2019 – Dec 2022

Full Stack Developer | Nairobi, Kenya · Fintech & Digital Platforms

- Led end-to-end development of a Laravel-based digital onboarding platform integrating with financial institutions for Java and React/Angular, reducing customer onboarding time by 50%.
- Designed and built secure RESTful APIs enabling data exchange between disparate systems - implementing authentication flows, error handling, and reconciliation logic to ensure reliable, end-to-end data integrity across integrations.
- Implemented end-to-end workflows spanning data capture, backend processing, and reporting layers - collaborating with product and technical teams to translate functional requirements into working system configurations across web and mobile platforms.

- Designed and maintained MySQL and PostgreSQL database schemas - writing optimized SQL queries, managing migrations, and applying indexing strategies to maintain data integrity and performance at scale.
- Developed mobile application components bridging backend APIs and mobile UIs, supporting data synchronization and consistent cross-platform functionality within an agile delivery team operating across multiple implementation contexts.
- Maintained Git-based version control across all projects, collaborating with distributed teams using branching workflows, pull requests, and structured code reviews to uphold code quality standards.

TECHNICAL SKILLS

Backend: Java (Spring Boot), Python, Node.js, .NET, Laravel (PHP)

Frontend: React, React Native, Next.js, Angular, Vue.js, TypeScript, HTML5, CSS3, JavaScript

APIs: REST (FHIR-compliant services), OpenAPI / Swagger, GraphQL, WebSockets, HL7 / FHIR R4 data standards

Databases: MySQL, PostgreSQL, SQL Server, MongoDB, Redis - schema design, migrations, query optimisation

DevOps: Docker, Kubernetes (K8s), Jenkins, GitHub Actions, CI/CD Pipelines

Cloud: AWS, Azure DevOps, Linux

Security: OAuth 2.0, JWT, OWASP Top 10, secure API authentication patterns

Digital Health Platforms: FHIR R4, HL7, DHIS2 (reporting integration), OpenSRP workflow concepts, health data interoperability

Agile & Tools: Jira, Git / GitHub, agile sprint delivery, iterative releases, cross-functional team collaboration

EDUCATION

Bachelor of Science in Software Engineering

2016 – 2020

Multimedia University of Kenya

KEY PROJECTS & ACHIEVEMENTS

Digital Account Opening Platform — *Ecobank Bank Kenya*

Implemented workflow configuration, KYC and core banking API integrations, data migration, user access management, and production support.

E-Biller Platform — *Stanbic Bank Kenya*

Optimized billing reconciliation and presentment workflows, improved platform uptime, and resolved production issues in collaboration with cross-functional teams.

FHIR-Aligned Reporting Integration — *Griffin Global Technologies*

Designed and implemented REST-based data exchange services aligned with FHIR interoperability standards, enabling structured health data flows across application and reporting layers. Contributed to DHIS2-connected reporting pipeline configuration and supported iterative UAT across multiple release cycles in a low-resource, multi-country delivery environment.
