

ISAAC RABIN

Software Engineer | Java · C# · Angular · React · API Integration · Microservices
+254 729 176 560 • isaacmrongo@gmail.com • rabin/portfolio • Nairobi, Kenya

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of professional experience designing and delivering enterprise-grade applications across backend development, frontend development, and system integration. Proficient in Java (Spring Boot), C# (.NET), Angular, React and Next.js, with strong expertise in RESTful API integration, workflow automation, and building scalable end-to-end solutions across application, data, and reporting layers. Demonstrated ability to diagnose and resolve cross-system issues, support iterative UAT and deployment cycles, and work effectively within agile, cross-functional teams across fast-paced, multi-country delivery environments.

PROFESSIONAL EXPERIENCE

Griffin Global Technologies

Feb 2023 – Mar 2026

Full Stack Engineer – Backend Systems & Cloud | Remote · Enterprise Platforms & Microservices

- Designed and maintained scalable frontend applications and RESTful APIs using Angular, React, .NET and Java, supporting platforms serving thousands of concurrent enterprise users.
- Built and optimised data pipelines and processing workflows using Python and Spark, integrating with AWS services (Lambda, S3, DynamoDB, ECR/ECS) to deliver reliable, scalable serverless and containerised architectures.
- Designed and integrated microservices and serverless functions on AWS, collaborating with front-end developers to deliver cohesive full-stack solutions aligned with enterprise architecture standards.
- Troubleshoot and debugged complex issues across backend, data pipeline, and frontend layers - identifying root causes quickly and implementing clean, maintainable fixes to maintain application stability in production.
- Participated in architectural discussions and technical decision-making within agile teams - contributing Scala, Python, and AWS expertise to shape system design and drive continuous improvement across multiple product lines.
- Maintained Git/GitHub version control with structured branching standards; implemented CI/CD pipelines using GitHub Actions and Terraform to enable consistent, automated deployments across AWS environments.
- Containerised applications using Docker and orchestrated with Kubernetes (ECS/ECR), achieving zero-downtime releases and scalable deployments across AWS cloud environments.

Adanian Labs

Oct 2019 – Dec 2022

Full Stack Developer | Nairobi, Kenya · Fintech & Digital Platforms

- Led end-to-end development of a Laravel-based digital onboarding platform integrating with financial institutions for Java and React/Angular, reducing customer onboarding time by 50%.
- Designed and built secure RESTful APIs and microservices - handling authentication flows, webhook processing, and data reconciliation logic across multiple third-party integrations, with strong attention to error handling and resilience.
- Built responsive React and Angular frontends, collaborating closely with backend API teams to deliver seamless full-stack experiences - translating abstract product requirements into clean, well-documented UI and integration code.

- Designed and maintained MySQL and PostgreSQL schemas - writing optimised SQL queries, managing migrations, and applying indexing strategies to maintain data integrity and query performance at scale.
- Developed and optimised data processing scripts in Python, automating workflows and enabling faster data throughput across application and reporting layers in a fast-paced agile delivery team.
- Maintained Git-based version control and CI/CD pipelines (Jenkins, GitHub Actions) across all projects - upholding code quality through structured branching, pull requests, and peer reviews.

TECHNICAL SKILLS

Backend: Python, Scala, Java (Spring Boot), Node.js, .NET, Laravel (PHP)

Frontend: React, React Native, Next.js, Angular, Vue.js, TypeScript, HTML5, CSS3, JavaScript

APIs: RESTful APIs, Microservices, Serverless Architectures, GraphQL, OpenAPI / Swagger

Databases: MySQL, PostgreSQL, SQL Server, MongoDB, Redis - schema design, migrations, query optimisation

DevOps: Docker, Kubernetes (K8s), Terraform, Jenkins, GitHub Actions, CI/CD Pipelines, Apache Spark

Cloud: AWS, Azure DevOps, Linux

Security: OAuth 2.0, JWT, OWASP Top 10, secure API design, payment gateway integrations

EDUCATION

Bachelor of Science in Software Engineering

2016 – 2020

Multimedia University of Kenya

KEY PROJECTS & ACHIEVEMENTS

Digital Account Opening Platform — *Ecobank Bank Kenya*

Delivered backend API integrations and data migration workflows using Python and RESTful services, supporting Ecobank Kenya's digital onboarding transformation with robust error handling and automated reconciliation.

E-Biller Platform — *Stanbic Bank Kenya*

Optimised billing reconciliation and data processing workflows, improved platform uptime through proactive debugging across backend and cloud layers, and contributed to CI/CD pipeline improvements with cross-functional teams.
